## Version 3.5

### Data Dictionary

*LAST UPDATED – 9/2024 (v1.88)*

*Get the latest vendor resources @ <https://vendors.mycares.net>*

The CARES Dataset, Version 3.5 is composed of three separate components. 1) A First Responder Dataset provides a standardized set of definitions describing a First Responding Agency event for a Cardiac Arrest event. 2) An EMS Dataset provides a standardized set of definitions describing an EMS event. 3) A Hospital Dataset provides a standardized set of definitions describing a Hospital event. This dataset employs the NEMSIS 3.5.0 standard.

**Any implementation of the CARES Version 3.5 dataset must include the use of the EMS dataset, and XML standard.**

Information provided in this document includes the following:

Name of the Data Element

Definition of the Data Element

Data Type of the Data Element (many data elements have comments provided to assist in the implementation of a database schema)

How to deal with missing or incomplete information (See Missing Data or Null Values below)

**Notes:**

- *Constraints - the constraints reflected in the fields in this document are meant to correspond to CARES constraints. See the NEMSIS definitions [www.nemsis.org](http://www.nemsis.org) for more detailed element information.*
- *There may be more than one NEMSIS code mapped to a CARES field in enumerated elements. For instance, more than one NEMSIS code might map to CARES "Other" field as specified in the element definitions.*
- *If a dateTime field has no time component, such as Date of Birth, use dateTime format and pass in midnight (all zeroes).*
- *NOT Values are ignored by CARES unless its use is specifically noted on an element's page.*

**PARSING NOTES**

***If an XML file contains a call that already exists in the system with the same Date of Arrest and Incident Number for a given agency (eArrest.14 or eTimes.03 and eResponse.03), the file will not parse and none of the records within the XML file will be processed.***

# ***General Information***

## EMS Agency Unique State ID

dAgency.01

### Definition

The unique ID assigned to the EMS Agency which is associated with all state licensure numbers and information.

<b>National Element</b>	Yes	<b>Pertinent Negatives (PN)</b>	No
<b>State Element</b>	Yes	<b>NOT Values</b>	No
<b>Version 2 Element</b>		<b>Is Nillable</b>	No
<b>Usage</b>	Mandatory	<b>Recurrence</b>	1:1

### Constraints

#### Data Type

String

#### minLength

1

#### maxLength

50

### Data Element Comment

This value must match the value set in the myCARES agency profile configuration.

## EMS Agency Number

dAgency.02

### Definition

The state-assigned provider number of the responding agency.

<b>National Element</b>	Yes	<b>Pertinent Negatives (PN)</b>	No
<b>State Element</b>	Yes	<b>NOT Values</b>	No
<b>Version 2 Element</b>		<b>Is Nillable</b>	No
<b>Usage</b>	Mandatory	<b>Recurrence</b>	1:1

### Constraints

<b>Data Type</b>	<b>minLength</b>	<b>maxLength</b>
String	1	15

### Data Element Comment

This value must match the value set in the myCARES agency profile configuration.

This is the primary identifier for the entire Demographic Section. Each of the Demographic sections must be associated with an EMS Agency Number. An EMS Agency can have more than one Agency Number within a state. This reflects the ability for an EMS Agency to have a different number for each service type or location (based on state implementation). The EMS Agency Number in dAgency.02 can be used to auto-populate eResponse.01 EMS Agency Number in the EMS Event section.

## EMS Agency State

dAgency.04

### Definition

The state/territory which assigned the EMS agency number.

<b>National Element</b>	Yes	<b>Pertinent Negatives (PN)</b>	No
<b>State Element</b>	Yes	<b>NOT Values</b>	No
<b>Version 2 Element</b>	<b>D01_0</b>	<b>Is Nillable</b>	No
<b>Usage</b>	Mandatory	<b>Recurrence</b>	1:1

### Constraints

#### Pattern

[0-9]{2}

### Data Element Comment

This value must match the value set in the myCARES agency profile configuration.

This has been clarified to reflect that it is the state in which the EMS Agency resides and the state associated with the EMS Agency number.

## Software Used to Create This File

eRecord.03

### Definition

The name of the software used to create this file.

<b>National Element</b>	Yes	<b>Pertinent Negatives (PN)</b>	No
<b>State Element</b>	Yes	<b>NOT Values</b>	No
<b>Version 2 Element</b>	E01_03	<b>Is Nillable</b>	No

### Data Element Comment

This is the EMS Agency's software, not the state or other level software, which electronically received the data from the local EMS Agency.

## Software Version

eRecord.04

### Definition

The version of the application used to create this record.

<b>National Element</b>	Yes	<b>Pertinent Negatives (PN)</b>	No
<b>State Element</b>	Yes	<b>NOT Values</b>	No
<b>Version 2 Element</b>	E01_04	<b>Is Nillable</b>	No

[0-9]{4}-[0-9]{2}-[0-9]{2}T[0-9]{2}:[0-9]{2}:[0-9]{2}(\.\d+)?(\+|-)[0-9]{2}:[0-9]{2}

### Data Element Comment

If none is passed and eTimes.03 is nil or missing, the date value from eTimes.03 will be used.

This element is a component of the Utstein Cardiac Arrest Criteria as identified in the American Heart Association journal "Resuscitation" from 2004 entitled "Cardiac Arrest and Cardiopulmonary Resuscitation Outcome Reports".

<http://circ.ahajournals.org/cgi/content/full/110/21/3385>

Changed from estimated time prior to EMS arrival to date/time of cardiac arrest.

DateTime consists of finite-length characters of the form: yyyy '-' mm '-' dd 'T' hh ':' mm ':' ss ('.' s+)? (zzzzzz)

yyyy a four-digit numeral that represents the year  
 '-' separators between parts of the date portion  
 mm a two-digit numeral that represents the month  
 dd a two-digit numeral that represents the day  
 T separator that indicates time-of-day follows  
 hh a two-digit numeral that represents the hour  
 ':' a separator between parts of the time-of-day portion  
 mm a two-digit numeral that represents the minute  
 ss a two-integer-digit numeral that represents the whole seconds  
 '.' s+ (not required) represents the fractional seconds  
 ZZZZ (required) represents the timezone (as described below)  
 ZZ

Timezones, required, are durations with (integer-valued) hour and minute properties in the form: ('+' | '-') hh ':' mm

hh a two-digit numeral (with leading zeros as required) that represents the hours  
 mm a two-digit numeral that represents the minutes  
 '+' a nonnegative duration

# Incident Number

eResponse.03

## Definition

The incident number assigned by the 911 Dispatch System.

<b>National Element</b>	Yes	<b>Pertinent Negatives (PN)</b>	No
<b>State Element</b>	Yes	<b>NOT Values</b>	Yes (NEMESIS) No (CARES)
<b>Version 2 Element</b>	E02_02	<b>Is Nillable</b>	Yes (NEMESIS) No (CARES)
<b>Usage</b>	Required	<b>Recurrence</b>	1:1

## Constraints

**Data Type**  
String

**minLength**  
3

**maxLength**  
50

## Data Element Comment

The combination of Date of Arrest and Call Number must represent a unique event. **myCARES does not accept Not Values or Nil for this field. An Incident Number must be present in every Patient Care Report.**

## EMS Response Number

eResponse.04

### Definition

The internal EMS response number which is unique to each EMS vehicle's response to an incident within an EMS agency.

<b>National Element</b>	Yes	<b>Pertinent Negatives (PN)</b>	No
<b>State Element</b>	Yes	<b>NOT Values</b>	Yes (NEMSIS) No (CARES)

### Code List – eScene.24

Code	Description
9923001	No
9923003	Yes

### Data Element Comment

This is the first responder agency that first provided medical care during the arrest.

eScene.03 values are unique to an agency in CARES and may comprise a list of First Responder names in the myCARES application. Many states provide a list of all First Responder Agency Import Value Codes. Lists can also be obtained from the agency.

eScene.24 must be passed as “Yes” with eScene.03 in order for myCARES to identify which eScene.03 import value code is the first First Responder to provide medical care on scene.

Fire/First Responder is a CARES Required field. The following will be accepted by myCARES:

- First instance of eScene.24 = “Yes” with an associated import value code listed in eScene.03 will be mapped to Fire/First Responder.

All other combinations including no eScene.ResponderGroup being sent will select “No First Responder Dispatched” checkbox\*.

\*Note: Agencies that first respond with other units from their own agency on 100% of arrests may request an import default first responder of their agency to be applied instead of “No First Responder Dispatched.”

### Constraints

**Data Type**  
String

**minLength**  
2

**maxLength**

### Code List

Valid Destination Hospital w/ Agency or State Data Set Facility Import Value as set up in myCARES.

### Data Element Comment

Established state facility codes are preferred. If the patient is Pronounced in the Field (End of the Event), Destination Hospital is not expected or required.

CARES only imports eDisposition.02 when eDisposition.21 = Hospital (4221003 or 4221005) or Freestanding ED (4221023) or eDisposition.02 has a Not Value. All other destination types in eDisposition.21 are not supported for import in CARES.

### Data Element Comment

A value of "No" for all eScene.24 occurrences will mark the "No first responder dispatched" checkbox, unless eScene.24 = "Yes" for any instance in the file. An absence of eScene.24 from the file, with or without an eScene.03 value, will result in "Fire/First Responder" and "No First Responder dispatched" to be blank. See page 34 for details.

### Data Element Comment

This field maps to a `xs:dateTime` NEMSIS field eAirway.02. **To use eAirway.03, you must pass a datetime value in this field.** If the exact time is not known, pass the date value in eArrest.14 with midnight. The logic for the answer choice "No" really means the airway attempt was "Unsuccessful" and that the airway placement was attempted. It does NOT mean that the question was not applicable, not documented, etc. Not Values for this field will not be mapped.

eAirway.02 (Was advanced airway placed successfully in the field) is of datetime type. If you pass a date for this greater than the minInclusive value for this element, we will record this as a "Yes" answer. If you pass the minInclusive value of 1950-01-01T00:00:00-00:00 we will record a "No".

Examples:

#### Pass a "No" value:

<eAirway.02>1950-01-01T00:00:00-00:00</eAirway.02>

#### Pass a "Yes" with Combitude value

<eAirway.02>2013-06-04T00:00:00-08:00</eAirway.02>

# ***Hospital Dataset***

## ***Hospital Information***

## Passing Destination Hospital and Transfer Hospital data

Hospital information in an import may provide outcome data for *either* a destination *or* a transfer hospital the following ways. The hospital form fields are interdependent and must follow the below logic.

### Transfer with Complete or Partial Hospital Outcome Data from Transfer Hospital:

*Destination Hospital Elements and Data (no other element values will be parsed)*

- EROutcome must = 4 (Transferred)
- Hypothermia\_Provided\_Hosp can be answered
- Transfer\_hospitalid or Transfer\_hospital should be answered

*Transfer Hospital Elements and Data*

- If EROutcomeTrans = 5, the following elements can contain values:
  - HospOutcomeTrans can be answered
  - HospOutcomeDNRTrans can be answered
  - If HospOutcomeTrans or HospOutcomeDNRTrans = 2, the following fields may contain values
    - HospDispositionTrans
    - NeuroOutcomeTrans can be answered if there is a value for HospDispositionTrans

### Hospital Data for Destination Hospital ONLY:

*Destination Hospital Elements and Data*

- EROutcome must not = 4 (Transferred)
- Hypothermia\_Provided\_Hosp can be answered
- HospOutcome can be answered
- HospOutcomeDNR can be answered
- eOutcome.02 can be answered if ER or HospOutcome = Discharged Alive
- eArrest.13 can be answered if ER or HospOutcome = Discharged Alive and eOutcome.02 contains a value
- Transfer\_hospitalid or Transfer\_hospital should be answered only if HospOutcome or HospOutcomeDNR = Transferred
- If HospOutcome or HospOutcomeDNR = Transferred, eOutcome.02 and eArrest.13 will not be parsed

*Transfer Hospital Elements and Data*

- None of these elements for transfer hospital will be parsed

### Supplemental Hospital Elements:

- For eCustomConfiguration hospital elements: MyocardialInfarction, CoronaryAngiography/CoronaryAngiographyDateTime, CardiacStent, CABGPerformed, and ICDPlaced only the affirmative response between the Destination Hospital and Transfer Hospital should be passed. If the response is affirmative for both hospitals, then the response from the final destination hospital should be passed. If the response is negative for both hospitals, then the response from the final destination hospital should be passed.

## Emergency Room Outcome (Destination Hospital) eCustomConfiguration.EROutcome
